*****WARNING*****

URETHANE FOAM IS FLAMMABLE

DO NOT EXPOSE URETHANE FOAMS TO OPEN FLAMES OR INDIRECT HIGH TEMPERATURE IGNITION SOURCES SUCH AS BURNING OPERATIONS, WELDING, BURNING CIGARETTES, SPACE HEATERS OR NAKED LIGHTS

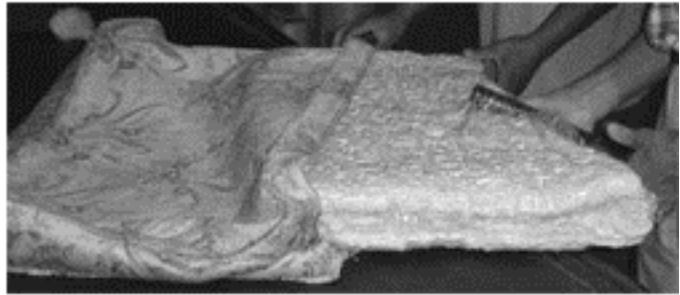

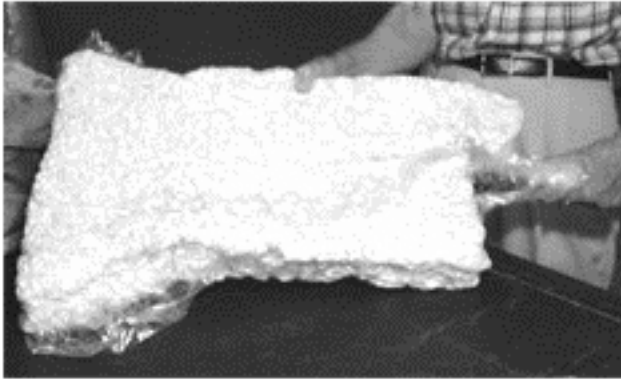

ONCE IGNITED, URETHANE FOAMS WILL BURN RAPIDLY, RELEASING GREAT HEAT AND CONSUMING OXYGEN AT A HIGH RATE. IN AN ENCLOSED SPACE, THE RESULTING DEFICIENCY OF OXYGEN WILL PRESENT A DANGER OF SUFFOCATION TO THE OCCUPANTS. HAZARDOUS GASES RELEASED BY THE BURNING FOAM CAN BE INCAPACITATING OR FATAL TO HUMAN BEINGS IF INHALED IN EXCESSIVE QUANTITIES

BY USING OUR COPYRIGHTED SYSTEM BELOW, YOU DO NOT NEED EXPENSIVE CUSHION FILLING MACHINES. ALL YOU NEED IS A VACUUM CLEANER WITH HOSE ATTACHMENT AND OUR PLASTIC FILLING BAGS LISTED ON THE NEXT PAGE.

~ CUSHION FILLING ~

STEP 1. INSERT THE FOAM FILLER OR SPRING UNIT INTO A THIN PLASTIC BAG. THESE CAN BE DACRON OR COTTON FELT WRAPPED.

STEP 2. INSERT THE VACUUM CLEANER HOSE INTO THE BAG, GRASP PLASTIC AROUND THE HOSE AIRTIGHT, OR FOLD THE PLASTIC BAG AND PUNCH A SMALL HOLE IN THE BOTTOM OF THE BAG AND INSERT THE HOSE INTO THE HOLE. THIS WILL MAKE IT EASIER TO REMOVE THE PLASTIC BAG BY UNFOLDING THE ENDS AND PULLING THE BAG OUT OF THE CUSHION. NOW START YOUR VACUUM CLEANER AND REMOVE ALL THE AIR FROM THE BAG AND FILLER. PLACE THE DEFLATED FILLER INTO THE CUSHION COVER.

STEP 3. YOU MAY THEN REMOVE THE PLASTIC BAG, OR LEAVE IT IN THE CUSHION TO PROTECT AGAINST SPILLS.

SEVEN MAJOR PHYSICAL PROPERTIES OF POLYURETHANE FOAM

- Density:** Indicates the molecular arrangement in the foam. It is measured in pounds per cubic foot. Density is controlled by the amount of water and/or gas producing fluorocarbon in the formulation. The more water used, the lower the density will be. Higher density means more foam, longer lasting foam, greater support retention.
- ILD:** Indentation Load Deflection-is a measurement of the firmness or load carrying capacity in pounds. There are two types of tests for ILD. One is the 25% ILD, which is the number of pounds required to indent a 50 square inch circular disc into a sample of foam. The disc is indented to a depth of 25% of the height of the sample. The second type is the 65% ILD which is measured the same as the 25% ILD but the disc is indented to a depth of 65% of the height of the sample. The 25% ILD is the method used by the furniture industry. The higher the ILD, the firmer the feel.
- Resiliency:** Indicates the amount of "spring back" in the foam. This is measured by dropping a steel ball from a height of 36 inches onto the foam sample. The height the ball bounces is compared to the 36 inches in terms of a minimum percentage. The higher the resiliency, the better the foam. Foam that has a "velvety" feel has a high resilience and a good "hand". Foam that has a harsh or rough feel is "boardy" and has a poor hand. Boardy foam has low resilience.
- Tensile:** The minimum pounds per square inch it takes to break a piece of foam by stretching.
- Elongation:** The minimum amount a piece of foam can stretch before breaking as compared to its original length.
- Tear:** The minimum amount of pounds per inch it takes to tear or split a piece of foam.
- Compression:** A measure of state of cure of a sample of foam, as well as its ability to recover its original shape after being subjected to a deforming load. In this test the foam sample is compressed and then subjected to a temperature of 158° for 22 hours. When it is released, the thickness is measured to determine the amount of loss.

Herculite®

Industrial & Marine Laminated Fabrics

FIRE RESISTANT – TEAR RESISTANT – IMPERMEABLE – MILDEW/ROT RESISTANT – ABRASION RESISTANT
ULTRAVIOLET RESISTANT – EASY TO CLEAN

Key Benefits

Extra Strength -Herculite fabrics are tear resistant and provide longer service life and more durable protection under the most rugged working conditions.

Self-Extinguishing -Inherently flame retardant, not just surface treated. "Snuffs out" as soon as flame source is removed.

Fluid proof -Liquids will not penetrate. Provides an impermeable barrier against fluids, gases, dust and other contaminants. Completely waterproof.

Inert- Resists mildew, most chemicals, oils, greases; will not rot.

Abrasion Resistant -Can sustain vigorous chafing action. Resists wear, stress, and punctures.

Easy To Handle -Comparatively lightweight coverings store compactly wet or dry, are easy to install and remove.

Weatherability -Retains its performance properties under sun, wind, rain; on shore or at sea. Ultraviolet resistant except for Clear (translucent) styles.

Soil Resistant -Easy to maintain; just soap and water does the job in most cases. Saves time and labor.

Simple Fabrication -By variety or combination of methods. Can be sewn, die-cut, cemented or electronically welded.

Electronic Welding -In addition to roll goods, available in large size rectangular or square sheets with air-tight, water-tight welded seams.
